	Urgent	Not Urgent
Important	• Textured spheres orbiting around the sun • Request the position and velocity of each planet on startup • Minimal 3D camera movement from input	• Smoother camera movement • Dynamic lighting • Star field background skybox
Not Important	• Use an API to request planet information with ease from the web • Use an API that can parse JSON into usable data • Use GLFW for input and for the window	• Dynamic star background instead of a simple skybox • Save the transforms of the planets to files for use later • Add dynamic moons rather than just planets
